

DEFINITION LINKS SERVICE

American Legal will build defined term links or pop up boxes to any word requested by the municipality. Many municipalities like this service so a user can see the definition of the word without going back to the defined terms section of the code. This service is available for the Code of Ordinances and the Land Development Code.

Example of a pop up box of a defined term

The screenshot displays the American Legal Publishing Corporation website interface. The main content area shows a table titled "PRINCIPLES OF INTERPRETATION" with four rows of text defining architectural terms. A red circle highlights the word "building" in the second row. A pop-up window titled "Building - Internet Explorer" is overlaid on the right side, showing the definition of "BUILDING" as "A structure that is enclosed and isolated by a roof and exterior walls and used for shelter, support, or enclosure as a residence, business, industry, or other public or private purpose, or accessory thereto, the construction of which may require a building permit under the State building code." The pop-up also includes a disclaimer.

CODE OF ORDINANCES TOWN OF CARY
THE CHARTER OF THE TOWN OF CARY
CODE OF ORDINANCES
APPENDIX A LAND DEVELOPMENT ORD

PRINCIPLES OF INTERPRETATION	
<ul style="list-style-type: none">A single wall shall mean the entire wall that shares the same architectural elevation as shown on the approved site plan. Architectural elevations are typically defined as the front, sides and rear of a building (alternatively called north, south, east and west elevations).	
<ul style="list-style-type: none">Regardless of whether a single wall has wall sections that project, recess or otherwise vary from the predominate wall plane, the rectangle shall include all signs that appear on the same architectural elevation.	
<ul style="list-style-type: none">For in-line tenants in a shopping center, or other building with a similar layout, all signs associated with a given occupant shall be enclosed with a single rectangle for purposes of calculating allowable sign area.	
<ul style="list-style-type: none">For multi-occupant buildings where occupants are not aligned in a row (with each occupant having a separate outside entrance), all pieces of information or other graphic representations on that wall which relate to an individual occupant or business within the building shall be measured as though part of one (1) sign. No one (1) individual sign will be allowed to occupy more space than ten (10) percent of the total wall area to which the sign is affixed.	

(B) Area Computation of Multi-Faced [Signs](#)

Where the [sign](#) faces of a double-faced [sign](#) are parallel or the interior angle formed by the faces is sixty (60) degrees or less, only one (1) display face shall be measured in computing [sign](#) area. The areas of all faces of a multi-faced [sign](#) shall be added together to compute the area of the [sign](#). [Sign](#) area of multi-faced [signs](#) is calculated based on the principle that all [sign](#) elements that can be seen at one (1) time or from one (1) vantage point should be considered in measuring that side of the [sign](#). Double-faced [signs](#) that are displayed on gateway entry monuments within Town approved area plans, may be displayed on walls with an interior angle of up to ninety (90) degrees.
